

Where do fish go?
How scientists are working together to
track fish over vast ocean space

MOVEMENT IS
VITAL FOR
SURVIVAL.

Feed

Reproduce

Escape predators

Also...

Recolonization for
population
survival.

Spatial management

Snappers				
General Snappers Regulations: Within state waters of the Atlantic and Gulf, the snapper aggregate bag limit is 10 fish per harvester unless the species rule specifies that it is not included in the aggregate. This means that a harvester can retain a total of 10 snappers in any combination of species. Exceptions are noted below.				
Snapper, Cuba ▲▲● Minimum Size Limits: • Atlantic and Gulf - 12" (see remarks) Daily Recreational Bag Limit: • Atlantic and Gulf - 10 per harvester Remarks: • May possess no more than 2 over 30" per harvester or vessel per day, whichever is less. 30" or larger not included within the snapper aggregate bag limit.	Snapper, Mutton ▲▲● Minimum Size Limits: • Atlantic and Gulf - 16" Daily Recreational Bag Limit: • Atlantic and Gulf - 10 per harvester	Snapper, Black and Wenchman ▲● Minimum Size Limits: • Atlantic and Gulf - No minimum size Daily Recreational Bag Limit: • Atlantic and Gulf - 10 per harvester	Snapper, Schoolmaster ▲▲● Minimum Size Limits: • Atlantic and Gulf - 10" Daily Recreational Bag Limit: • Atlantic and Gulf - 10 per harvester	
Snapper, Vermilion ▲▲● Minimum Size Limits: • Atlantic - 12" • Gulf - 10" Closed Season: • Atlantic and Gulf - Open year-round Daily Recreational Bag Limit: • Atlantic - 5 per harvester • Gulf - 10 per harvester Remarks: • Vermilion snapper not included within the snapper aggregate bag limit. • Atlantic: Zero daily bag and possession limit for captain and crew on for-hire vessels.	Snapper, Red ▲▲● Minimum Size Limits: • Atlantic - 20" • Gulf - 16" Season: • Atlantic - Open year-round • Gulf - Open May 24 to July 14. Daily Recreational Bag Limit: • Atlantic and Gulf - 2 per harvester Remarks: • Gulf - Zero daily bag and possession limit for captain and crew on for-hire vessels.	Snapper, Lane ▲▲● Minimum Size Limits: • Atlantic and Gulf - 8" Daily Recreational Bag Limit: • Atlantic - 10 per harvester • Gulf - 100 pounds (see remarks) Remarks: • Gulf not included within the Snapper aggregate bag limit.	All Other Snapper ▲▲● Minimum Size Limits: • Atlantic and Gulf - 12" Daily Recreational Bag Limit: • Atlantic and Gulf - 10 per harvester Remarks: • Includes: Blackfin, Dog, Mahogany, Queen, Silk & Yellowtail.

Species management

Why are scientists so interested in movement?

Human influence

Predicting change

HOW DO WE TRACK MOVEMENT?

A) Streamer/ Conventional / Visual tags

B) Data Storage or archival tags

C) Coded tags

D) Radio tags

E) Satellite tags

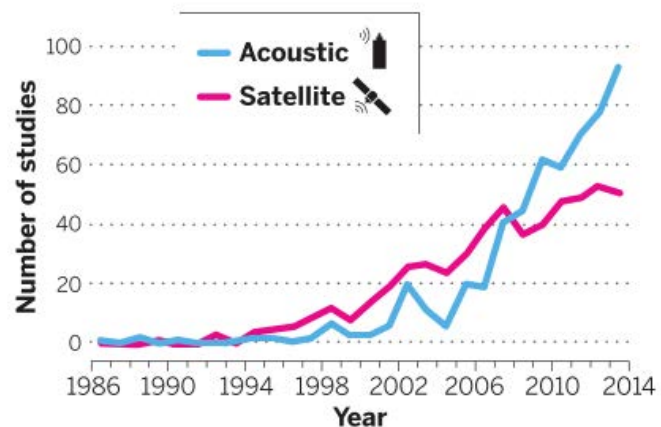

F) Acoustic transmitters

ACOUSTIC TELEMETRY (A TWO PART TECHNOLOGY)

Ultrasonic pingers (tags) are **attached** to or **implanted** in an animal.

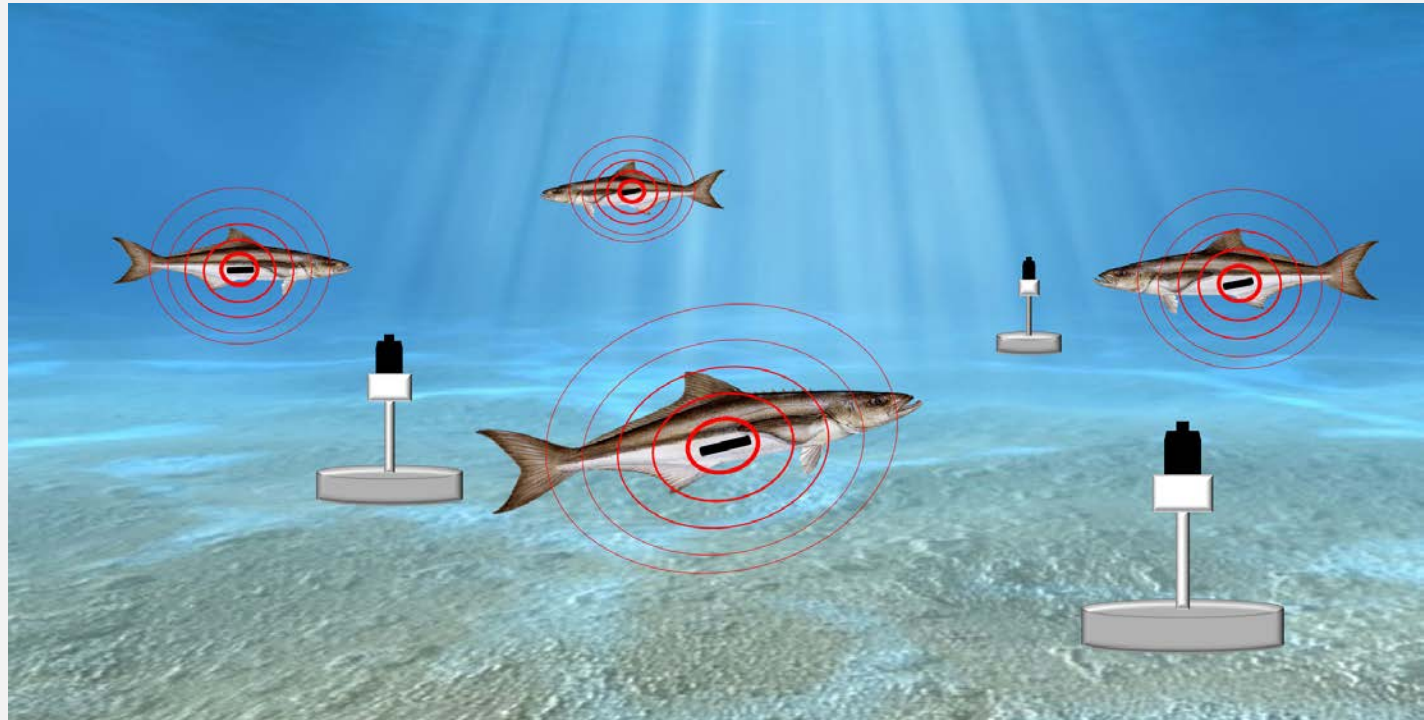

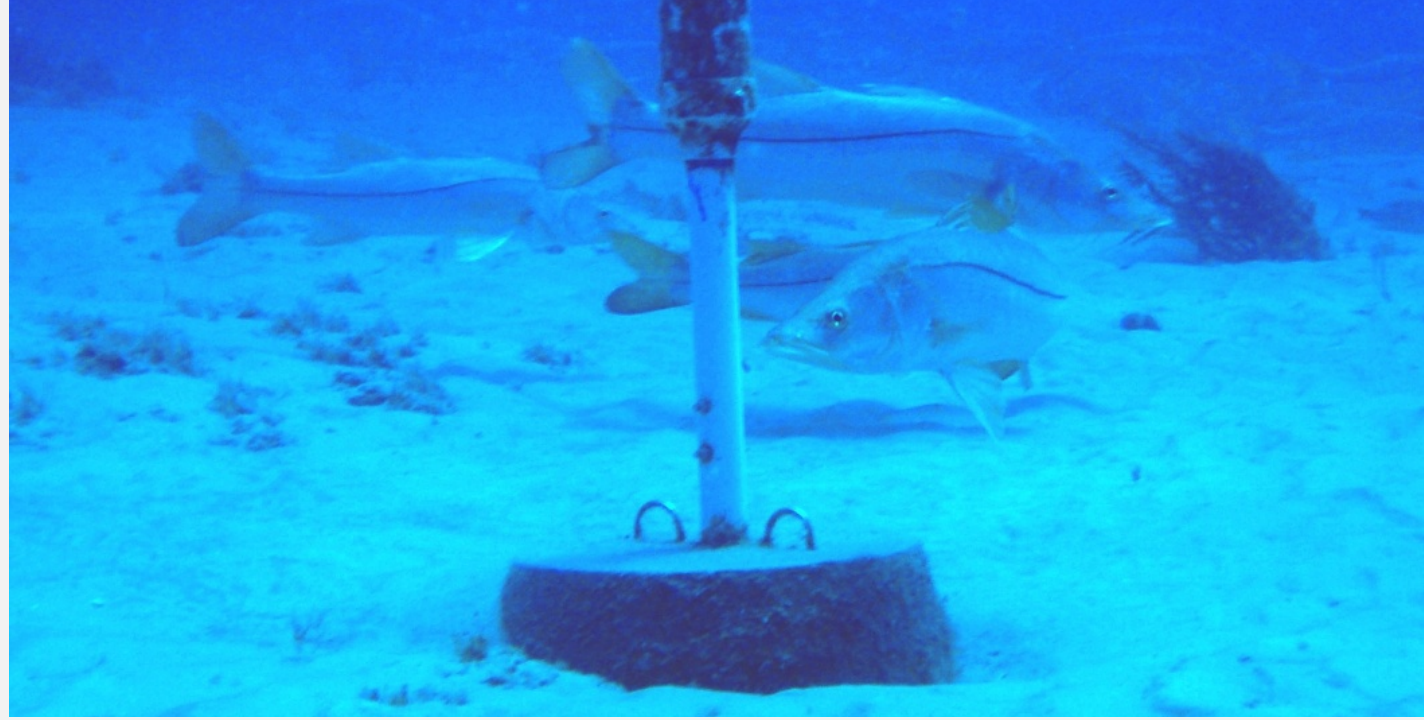

- Every tag has a unique code
- Randomly pings within a set time
 - Wide variety of sizes
- Up to 10 years battery life

ACOUSTIC TELEMETRY (A TWO PART TECHNOLOGY)

Receivers are placed underwater.

- Receiver records the unique code and date and time.
 - 'Listening' range up to one km.
- Serviced by researchers at least once a year.
- Limited to near coastal areas, but...

GLOBAL MAP OF COLLABORATIVE NETWORKS

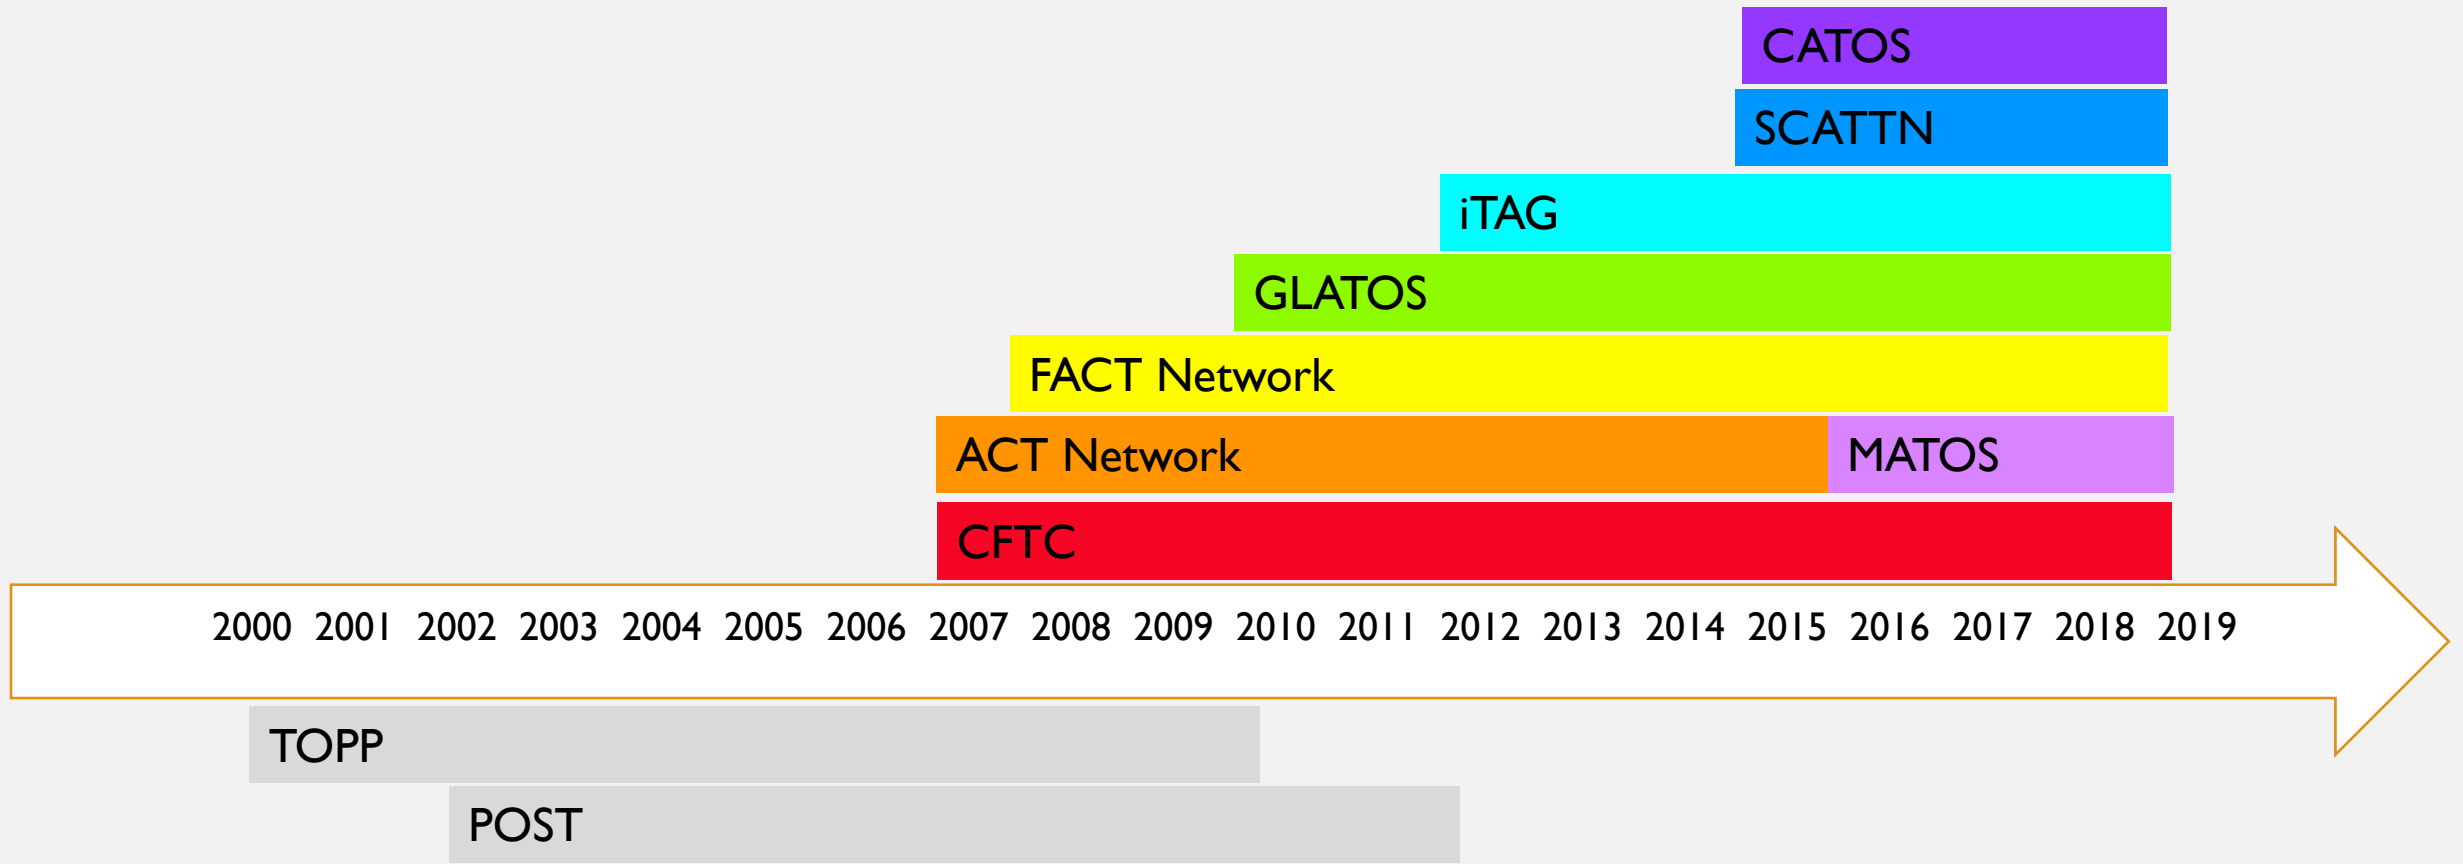

LEADERS IN TELEMETRY RESEARCH

MAP OF REGIONAL COLLABORATIVE NETWORKS IN THE CONTINENTAL US

TIMELINE OF REGIONAL COLLABORATIVE NETWORKS IN THE CONTINENTAL US

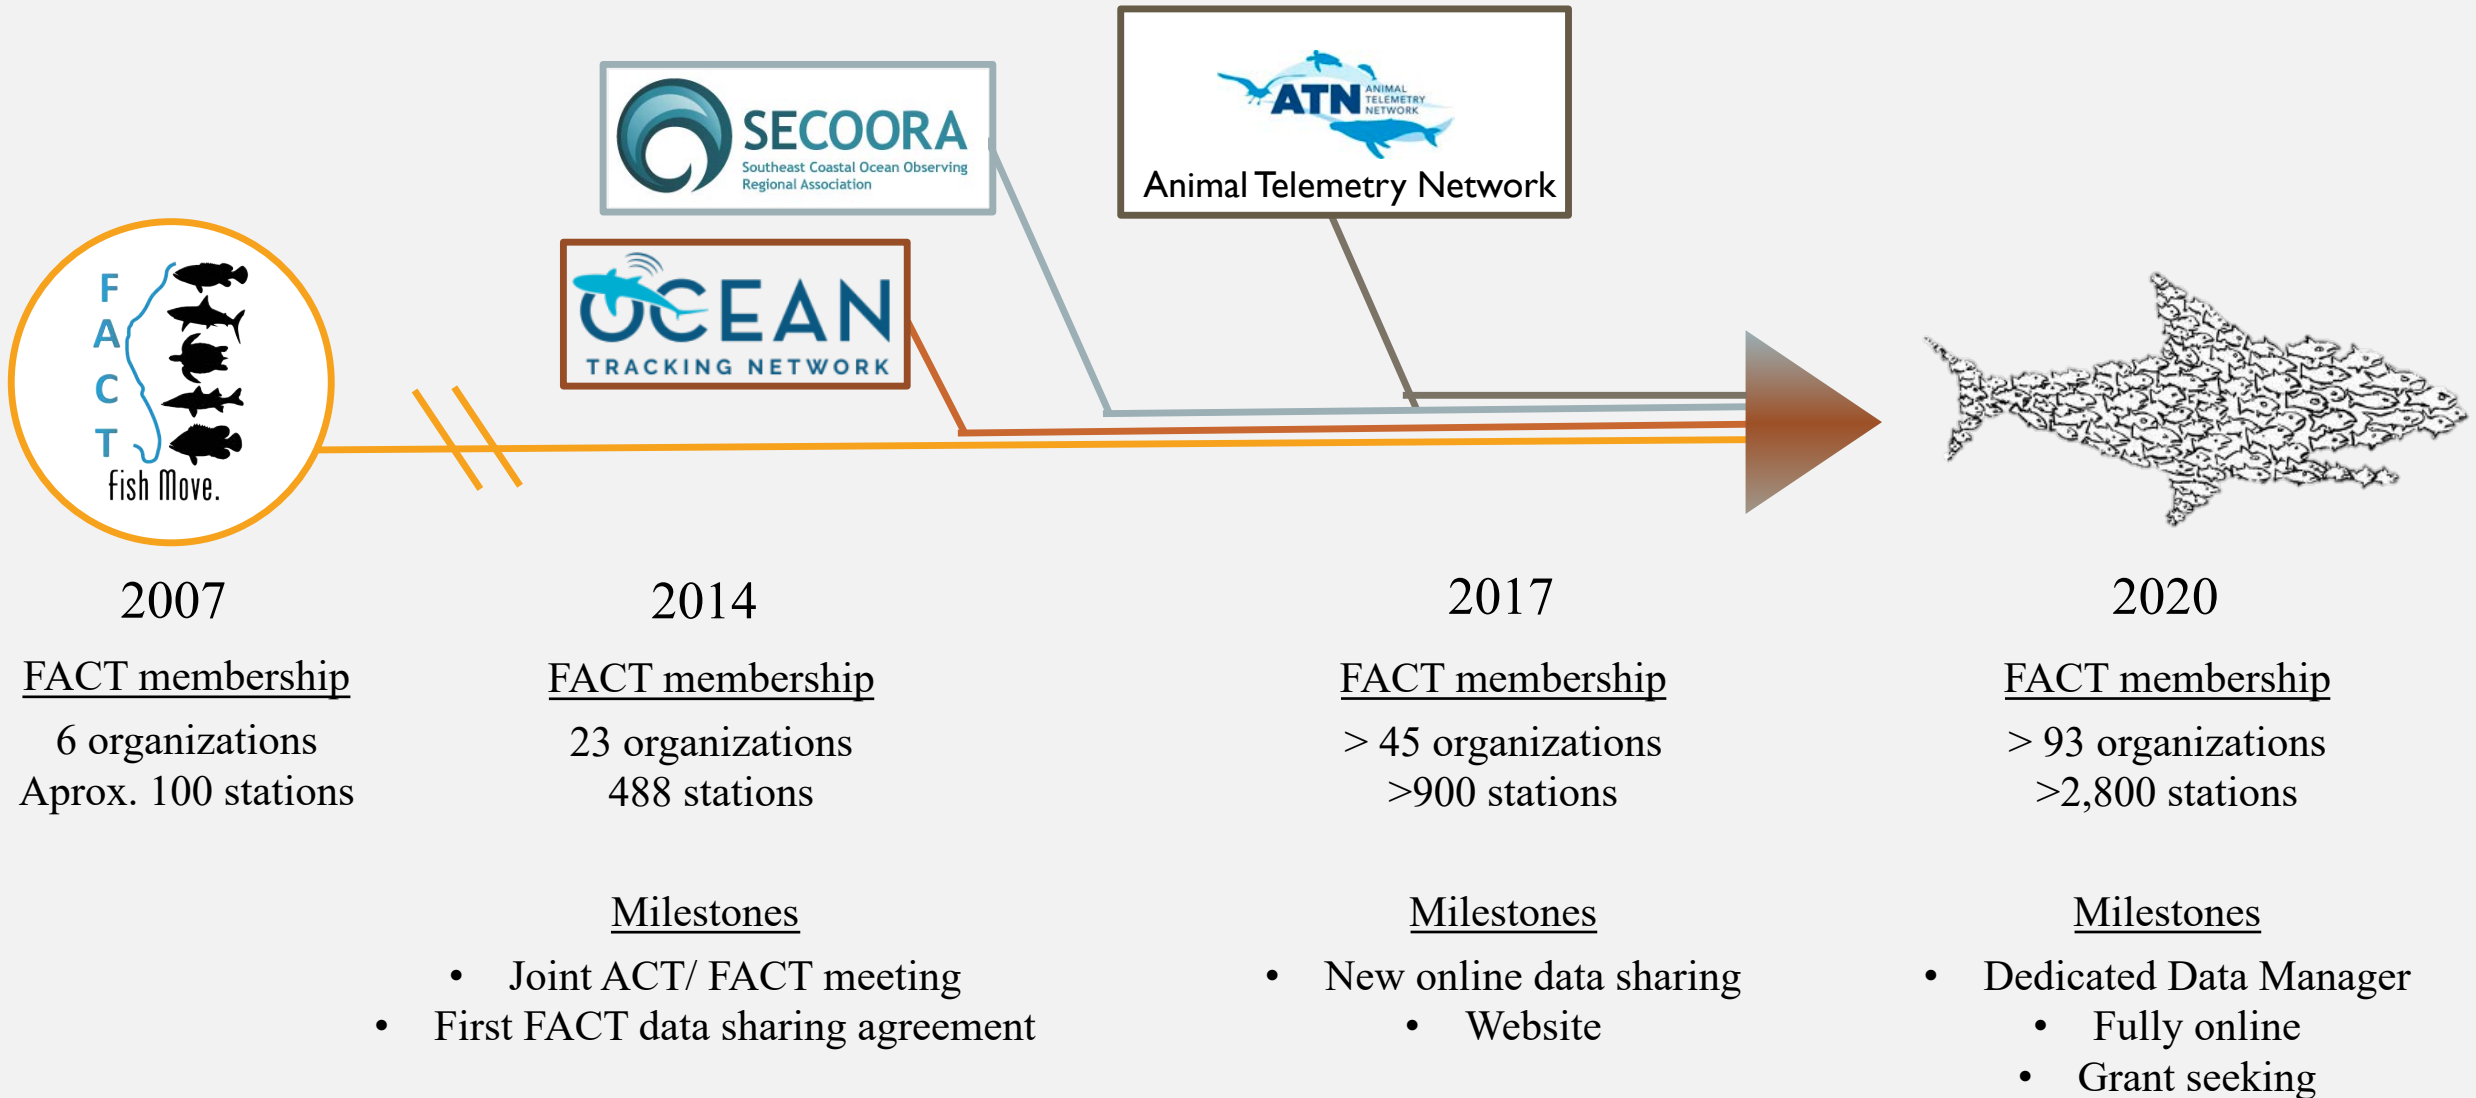

ACT - The Atlantic Coast Telemetry Network
CATOS – Champlain Acoustic Telemetry Observation System
CFTC – California Fish Tracking Consortium
FACT - The FACT Network
GLATOS – Great Lakes Acoustic Telemetry Observation System
iTAG – Integrated Tracking of Animals in the Gulf of Mexico

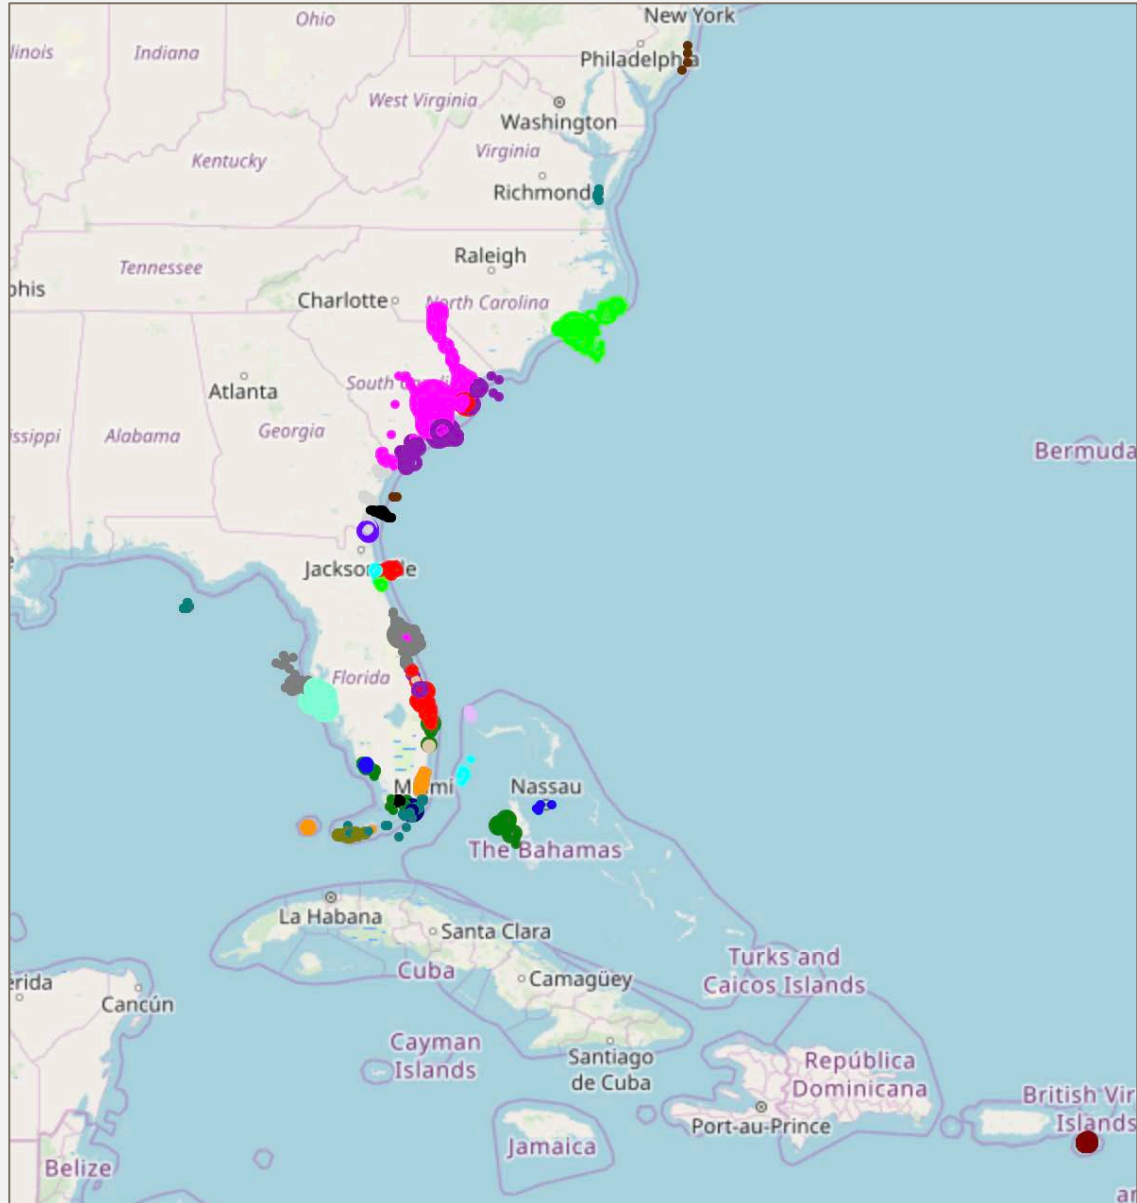

MATOS – Mid-Atlantic Telemetry Observation System
POST – Pacific Ocean Shelf Tracking
TOPP – Tagging of Pacific Predators
SCATTN – Southern California Animal Telemetry Tracking Network

Unknown dates
TEXAAN – Texas Acoustic Animal Tracking Network
USCAN – US Caribbean Acoustic Network

THE FACT NETWORK- BRIEF HISTORY

THE FACT NETWORK

Map of receivers registered in the FACT Network.

Telemetry Assets

8049 tags deployed total on 99 species

2474 active tags

~ 2,817 total receiver stations

Chris Kalinowsky and son tag a tripletail.

DATA SHARING MADE EASY FOR RESEARCHERS

- Researchers upload data to a secure website.
 - Detections are automatically matched and provided to tag owner.
 - Data are formatted and archived.
 - Data are cross-matched against all compatible databases.
- Online Database
 - **120 registered projects**
 - 174.5 million detections from
 - 81.2 mil verified animal detections
 - 77.7 mil non-animal
 - 15.4 mil unverified detections

BENEFITS OF REGIONAL COLLABORATIVE GROUPS

Networking

Capacity building

Assistance with new projects

Reaching group consensus on issues and creating policy

Lobbying for technological advancements/changes and funding

Conduits of information and promotion of projects

Development and sharing of analytical tools

Collaboration

Sense of Community

WHY REINVENT THE
WHEEL WHEN YOU
DON'T HAVE TO?

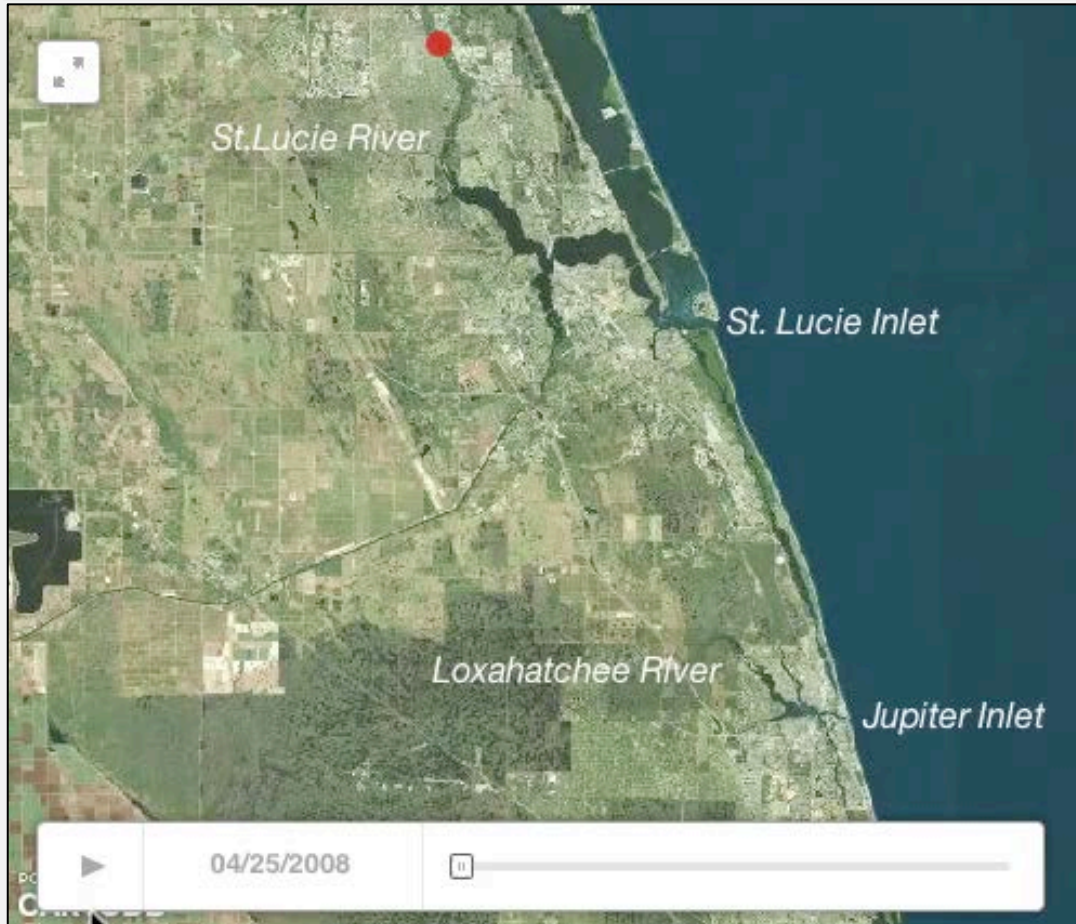

A large school of fish, possibly tuna, swimming in a deep blue ocean. The fish are silhouetted against the lighter blue background, creating a sense of movement and depth. A central text box with a white border contains the message.

WITH COLLABORATION, WE CAN
ASK MORE QUESTIONS

MOVEMENT IN A SINGLE SYSTEM

43 in. (1100 mm) TL female during the 2008 spawning season

Why does this matter?

NOVEL MOVEMENTS

Tripletail, *Lobotes surinamensis*

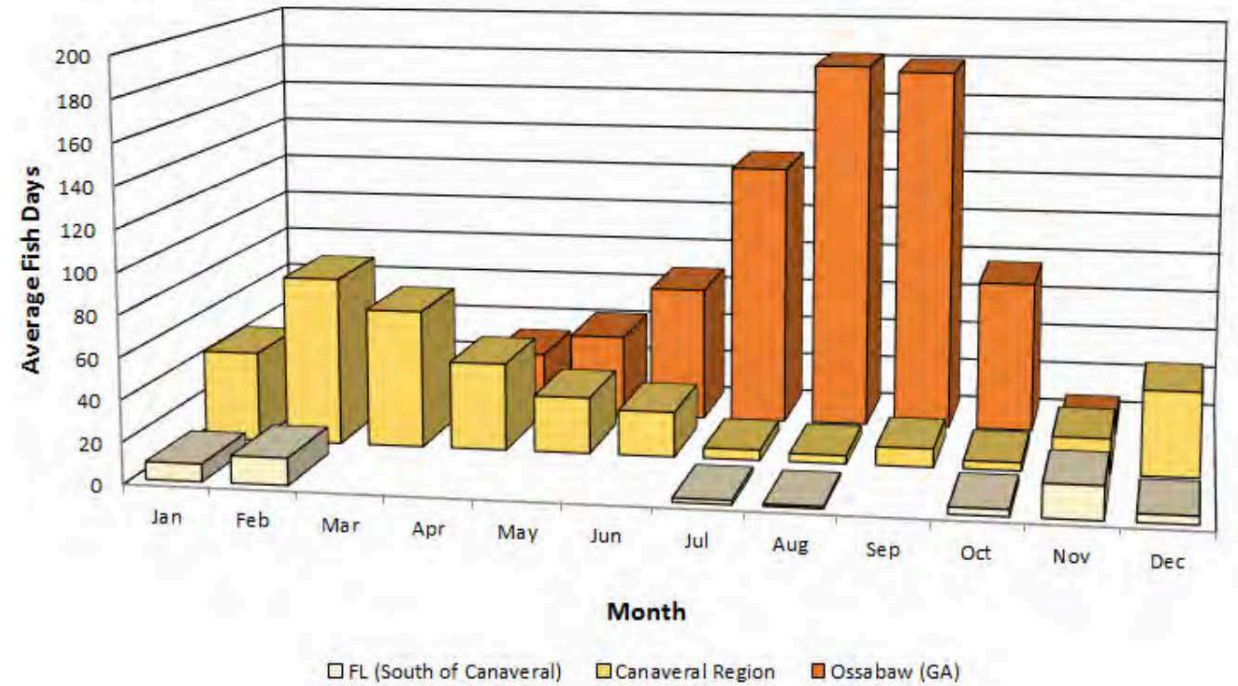

Figure 3.15 Average monthly fish days by region 2009-2012 from the GADNR acoustic tagging study. South Florida region includes waters south of Canaveral to Jupiter Inlet, Florida (GADNR 2015).
Biological Profile for Tripletail in the Gulf of Mexico and the Western Central Atlantic

As a result....

- New Florida Regulations
- Larger, multi-state tagging study

MULTI-STATE COLLABORATION

Cobia, *Rachycentron canadum*

Detections of tagged cobia in the ACT, FACT, and iTAG Networks. Detections are colored by deployment locations: South Carolina (red), Georgia (orange), north Florida (yellow), central Florida (green), south Florida (blue).

	Rec ACL	Rec Catch	Com ACL	Com Catch	Closure
2015 GA-NY (ATLANTIC)	630,000	1,541,575	60,000	53,364	Rec 2016 Season to be shorted
2015 E. FL (GULF)	830,000	372,118	70,000	53,255	

MULTI-SPECIES SYNTHESIS

Using Acoustic Telemetry to Understand Connectivity of Gray's Reef National Marine Sanctuary to the U.S. Atlantic Coastal Ocean

Authors
Bethany L. Williams
Kimberly Roberson
Joy Young
Matthew S. Kendall

September 2019

NOAA TECHNICAL MEMORANDUM NOS NCCOS 259

NOAA National Centers for Coastal Ocean Science

10 Years of telemetry data

Identified all animals detected in the array
(32 researchers, 160 animals, 18 species)

Described timing and seasonality of species and
connectivity to greater area

FUTURE DIRECTIONS OF COLLABORATIVE NETWORKS

Coordination amongst networks

Promote collaborative analysis of past studies

Foster synergy between areas of science

Address the gap between science, public, and fisheries managers
