West Florida Coastal Ocean Model (WFCOM)

- WFCOM is designed to **downscale** from the deep-ocean, across the continental shelf and into the estuaries by nesting the **unstructured grid FVCOM** in the structured grid Gulf of Mexico HYCOM.
- Resolution varies from ~8 km along the open boundary to **150 m** in the estuaries.
- The WFCOM domain is designed to benefit from HYCOM data assimilation (constraining the deep-ocean/WFS interactions); without which deep-ocean errors along the open boundary would render the WFS simulations less than useful.
- **Daily, automated Nowcast/Forecasts** are posted on the web and distributed to NOAA GOODS via THREDDS.
- Recent published societal and ecological applications include: How **Deepwater Horizon oil** arrived on northern Gulf beaches, Origins and pathways of water upwelled onto the WFS, Season prediction of **K. brevis red tide**, Solving the **gag grouper recruitment** conundrum. More generally, we have shown that there exists a certain spatial order to ecological observations on the WFS and this spatial order is associated with the coastal ocean circulation.

Coupled Northwest Atlantic Prediction System (CNAPS)

The Coupled Northwest Atlantic Prediction System (CNAPS) is a three-dimensional marine environment nowcast and forecast model developed by the Ocean Observing and Modeling Group. This fully coupled ocean circulation, wave, and atmosphere modeling system predicts conditions over a wide area of the coastal northwest Atlantic Ocean on a daily basis. The model domain covers from the eastern edge of Nova Scotia to...

Marine Environment in the South Atlantic Bight and Gulf of Mexico (SABGOM)

The South Atlantic Bight – Gulf of Mexico (SABGOM) model is a three-dimensional marine environment nowcast and forecast model developed by the Ocean Observing and Modeling Group. This system provides predictions of ocean circulation, wave, and atmosphere conditions over the South Atlantic Bight and Gulf of Mexico on a daily basis. The model domain covers the U.S. east coast from New Jersey...
