Augmenting Ocean Observing through Artificial Intelligence: Annotation, Data Standards, and Applications

Luke McEachron

David Kochan, Lauren Showalter\(^1\), Kyle Wilcox\(^2\), Enrique Montes\(^3\), Frank Muller-Karger\(^4\), Dan Otis\(^4\)

\(^1\)Florida Fish and Wildlife Conservation Commission, \(^2\)Axiom Data Science, \(^3\)University of Miami, \(^4\)University of South Florida
Overview of the Project

• Developing an AI resource on SECOORA’s existing digital infrastructure that
  • Serves as an organized gateway to complementary AI resources
  • Hosts reproducible ocean observing pipelines to help regional partners complete AI projects through worked examples

• Existing AI resources are often specialized
  • How do you engage resources in one place?
Accomplishments

AI annotation libraries, model repositories, standards, metadata and formatting requirements, and storage and access solutions.

- 8 meetings with different industry, academia, non-profit, and government AI stakeholders and domain experts;
- 2 machine learning training exercises;
- 3 symposia; 2 workshops

Documentation

Use Cases

Video

Acoustics

FLAQ Live Stream

Edge Computing Data Buoy

Modeling Workshop

Boat/No-boat; Fish/No-fish
Challenges and Looking Ahead

- Connections to other libraries
  - NCEI
  - Fathomnet
  - Coralnet
  - Lila
- Model Zoo
  - Yolo, ResNet, Chirp
- Standards and formatting
- Video, acoustic, imagery management applications
