

Salt Marsh Ecology - Sketch a Model of a Wetland

Use what you've learned so far to sketch your own wetland. Feel free to include words and symbols and be sure to label everything. Don't worry about your artistic ability. The focus of this activity is to think about how different components of a wetland interact.

Instructions:

1. Draw a base landscape of a coastal wetland.
 2. Draw and label at least 2 animals and 2 plants present in a wetland.
 3. Draw and label 2 abiotic components that influence a wetland.
 4. Draw and/or label a keystone species.
