

**George Sedberry**  
NOAA National Marine Sanctuaries

George Sedberry is Sanctuary Science Coordinator for the Southeast Atlantic, Gulf of Mexico and Caribbean Region of the Office of National Marine Sanctuaries, National Oceanic and Atmospheric Administration . His interests and experience are in the biology, conservation and management of marine fishes, as well as deep-sea biology and coral-reef ecology. Most of his research has concentrated on reefs of subtropical and temperate waters off the southeastern U.S., but he has conducted research on Marine Protected Areas in Belize and Madeira, and

on population biology of fishes from the North and South Atlantic, Caribbean and Mediterranean Seas, and the western South Pacific. He was a member of the US National Committee for the International Census of Marine Life, and he currently serves on the Scientific and Statistical Committee, the Marine Protected Areas Expert Workgroup and the Habitat and Environmental Protection Advisory Panel of the South Atlantic Fishery Management Council. He is an Adjunct Professor at the College of Charleston and the University of Georgia's Skidaway Institute of Oceanography, and has authored over 100 publications on marine fishes and ecosystems.
